PROTEXLEGNO®

Protective antiseptic primer for wood

With FEDERCHEMICALS problems connected with wood will be resolved.

Wood is a material produced by nature, it is noble, natural, warm and inviting with a charm that never dies. It creates an intimate, functional aesthetic atmosphere: beautiful to look at but also precious because of its insulating qualities. Like all natural products, wood has a long life if treated and protected with care using products and methods suitable to conserve it over the years.

FEDERCHEMICALS products nourish the wood allowing it to breathe and keep it "alive" renewing its splendour and exalting its functional character.

FEDERCHEMICALS

An important name in the treatment of wood. Long experience and patient craftsmanship are evident both in the creation of new modern products and in the continuous development of traditional production systems.

FEDERCHEMICALS which has been operating for years in the cleaning and treatment of surfaces sector, offers the market a line of primer, varnishing and protective finishing products for wood, to be applied on interior and exterior walls, (preferably using a brush), beading, frames, casings, blinds, beams, fences and any

other wooden objects where their natural look needs to be maintained.

Note: the shades of **Protexlegno** may undergo changes according to the type of wood. We suggest applying two coats of the product leaving 18 hours between the first and second coat if the product is coloured; or 24 hours between the two coats if the product is clear neutral and gloss.

Finish the priming treatment with clear waxed **Forever®**.

EIGHT WOOD FRIENDLY MIXABLE SHADES.

Protexlegno primer, penetrates deep into the wood but does not form a skin, it does not PEEL and is long lasting. If treated correctly it protects against weathering agents, mould and the sun. Unprotected wood suffers and is prone to disease. **Protexlegno** while protecting the wood from agents, delicately transforms it giving it a clear hue; it protects it and is nature friendly. The product is a good fungicide and bactericide inhibitor against micro-organisms and blue rot. **Protexlegno** is supplied in 14 shades, the following are the most used.

LARCH

WALNUT

DOUGLAS PINE

TEAK

CLEAR WALNUT

ROSEWOOD
